Professional Profile

I am a tester with over 1.5 years of experience, specializing in both manual and automated testing. I have strong technical skills that I continually improve through personal projects available on my GitHub:

- **Test Automation with Selenium** - Automated testing project for demoQA website. The goal was to create a scalable test suite for verifying key functionalities like forms, buttons, tables, and dynamic elements.
  - ➢ **Technologies**: Java, Selenium WebDriver, TestNG, Maven, JUnit, WebDriverManager
  - ➢ **Design pattern**: Page Object Model (POM)

- **API Testing with REST Assured** - Focused on testing APIs using Rest Assured to validate endpoint correctness, response codes, and data integrity. GET, POST, and DELETE requests were tested on a local API server.
  - ➢ **Technologies**: Rest Assured, TestNG, JSON Server, JSON Schema Validator, Apache POI

I am constantly improving testing processes and enhancing my automation skills. I enjoy sharing my knowledge and supporting new team members, contributing to the overall quality of project implementations.

Education

| 2019 - 2021 | **Poznan University of Economics and Business** |
| | Master's Degree in Computer Science and Economic Analysis |

| 2016 - 2019 | **State University of Applied Sciences in Konin** |
